

CERTIFIED INFORMATION SYSYTEMS SECURITY OFFICER

KEY DATA

Course Title: C)ISSO **Duration:** 5 days

CPE Credits: 40

Class Format Options:

Instructor-led classroom Live Virtual Training Computer Based Training

Who Should Attend:

IT Auditors System Administrators IS Managers Security Consultants

Prerequisites:

A general knowledge of information systems and security

Provided Materials:

Student Workbook Security Reference Manual

Certification Exam:

C)ISSO: Certified Information Systems Information Officer

Certification Track:

C)ISSO: Certified Information Systems Information Officer

COURSE OVERVIEW

The Certified Information Systems Security Officer course is designed for forward-thinking security professionals that want the advanced skillset necessary to manage and consult businesses on information security.

The C)ISSO addresses the broad range of industry best practices, knowledge and skills expected of a security leader. The Candidate will learn both the theory and the requirements for practical implementation of core security concepts, practices, monitoring and compliance. Through the use of a risk-based approach, a C)ISSO is able to implement and maintain cost-effective security controls that are aligned with business requirements.

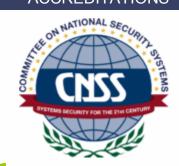

Whether you are a responsible for the management of an Cyber Security team, a Security Officer, an IT auditor or a Business Analyst, the C)ISSO course is the ideal way to increase your knowledge, expertise, skill, and credibility.

The C)ISSO program standards are closely aligned with those of the ISO27001, NIST, CISM® and the CISSP® CBK® exam objectives. The C)ISSO excels by providing a well-rounded, comprehensive overview of essential security topics.

COURSE HISTORY

The Certified Information Systems Security Officer Course and Certification were developed as result of the Combined Defense Information Systems Management (CANUS CDISM) initiative between the Department of National Defense of Canada (DND) and the Department of Defense of the United States (DOD).

ACCREDITATIONS

Accreditor:

The United States of America National Security Agency's Committee of National Security Systems

Accreditations:

NSTISSI-4011 National Training Standard for Information Systems Security (INFOSEC)

CNSSI - 4012 National Information Assurance Training Standard for Senior Systems Managers

Also available as:

LIVE VIRTUAL **TRAINING**

Attend live classes from anywhere in the world!

Visit Mile2.com for more information

In the CANUS CDISM Memorandum of Understanding #19741001181 the following is stated:

I. The CDRSN National Information System Security Officer (ISSO) is the focal point for all security issues pertaining to this network.

II. The Director Information Management Security (DIMSECUR) is the DND authority for security assessment of the CDRSN, including the approval of Interim Authority to Process (IAP) and Authority to Communicate.

With these initiatives in mind, Mile2 created a certification for the ISSO called the Certified Information Systems Security Officer. The C)ISSO training and certification program prepares and certifies individuals to analyse an organization's information security risks and to design a security solution to mitigate these risks. To summarize, C)ISSOs are proficient in risk analysis, risk mitigation, application security, network security, operations security and business continuity.

¹http://www.state.gov/documents/organization/111449.pdf

UPON COMPLETION

Students will:

- Have knowledge to detect security threats and risk
- Have knowledge to accurately report on their findings from examinations
- Have knowledge to design a security solution to mitigate risk and threats
- Be ready to sit for the C)ISSO Exam

EXAM INFORMATION

The Certified Information Systems Security Officer exam is taken online through Mile2's Assessment and Certification System (MACS), which is accessible on your mile2.com account. The exam will take 2 hours and consist of 100 multiple choice questions. The cost is \$300 USD and must be purchased from the store on Mile2.com.

COURSE CONTENT

Module 1: Risk Management Module 2: Security Management

Module 3: Identification and Authentication

Module 4: Access Control

Module 5: Security Models and Evaluation Criteria

Module 6: Operations Security

Module 7: Symmetric Cryptography and Hashing

Module 8: Asymmetric Cryptography and PKI

Module 9: Network Connections

Module 10: Network Protocols and Devices

Module 11: Telephony, VPNs and Wireless Module 12: Security Architecture and Attacks Module 13: Software Development Security

Module 14: Database Security and Development **Module 15:** Malware and Software Attacks

Module 16: Business Continuity

Module 17: Disaster Recovery

Module 18: Incident Management, Law, and Ethics

Module 19: Physical Security

DETAILED MODULE DESCRIPTION

Module 1 - Risk Management

What Is the Value of an Asset? What Is a Threat Source/Agent?

What Is a Threat?

What Is a Vulnerability?

Examples of Hidden Vulnerabilities

What Is a Control? What Is Likelihood? What Is Impact?

Control Effectiveness

Risk Management

Purpose of Risk Management

Risk Assessment

Why Is Risk Assessment Difficult?

Types of Risk Assessment

Different Approaches to Analysis

Quantitative Analysis **ALE Values Uses**

Qualitative Analysis - Likelihood Qualitative Analysis - Impact Qualitative Analysis – Risk Level

Qualitative Analysis Steps

Management's Response to Identified Risks

Comparing Cost and Benefit Cost of a Countermeasure

Module 2 - Security Management

Enterprise Security Program

Building A Foundation

Planning Horizon Components

Enterprise Security – The Business Requirements

Enterprise Security Program Components

Control Types "Soft" Controls

Technical or Logical Controls

Physical Controls Security Roadmap

Senior Management's Role in Security

Negligence and Liability

Security Roles and Responsibilities Security Program Components

Security and the Human Factors

Employee Management Human Resources Issues Importance to Security?

Recruitment Issues

Termination of Employment

Informing Employees About Security

Enforcement

Security Enforcement Issues

Module 3 - Authentication

Agenda

Access Control Methodology Access Control Administration Accountability and Access Control

Trusted Path Who Are You?

Authentication Mechanisms

Strong Authentication

Authorization Access Criteria Fraud Controls

Access Control Mechanisms

Agenda

Biometrics Technology

Biometrics Enrolment Process Downfalls to Biometric Use Biometrics Error Types Biometrics Diagram Biometric System Types

Agenda

Passwords and PINs Password "Shoulds" Password Attacks

Countermeasures for Password Cracking

Cognitive Passwords

One-Time Password Authentication

Agenda

Synchronous Token

Asynchronous Token Device

Cryptographic Keys

Passphrase Authentication

Memory Cards Smart Card Agenda

Single Sign-on Technology Different Technologies

Scripts as a Single Sign-on Technology

Directory Services as a Single Sign-on Technology

Thin Clients

Kerberos as a Single Sign-on Technology

Tickets

Kerberos Components Working Together

Major Components of Kerberos Kerberos Authentication Steps

Why Go Through All of this Trouble? Issues Pertaining to Kerberos SESAME as a Single Sign-on Technology Federated Authentication Agenda IDS Network IDS Sensors Types of IDSs Behaviour-Based IDS **IDS Response Mechanisms** IDS Issues

Module 4 - Access Control

Trapping an Intruder

Role of Access Control Definitions More Definitions Layers of Access Control Layers of Access Controls Access Control Mechanism Examples Access Control Characteristics Preventive Control Types **Control Combinations** Administrative Controls Controlling Access Other Ways of Controlling Access **Technical Access Controls** Physical Access Controls Accountability

Information Classification Information Classification Criteria

Declassifying Information Types of Classification Levels

Models for Access

Discretionary Access Control Model

Enforcing a DAC Policy

Mandatory Access Control Model

MAC Enforcement Mechanism - Labels

Where Are They Used?

Role-Based Access Control (RBAC) Acquiring Rights and Permissions

Rule-Based Access Control

Access Control Matrix

Access Control Administration

Access Control Methods

Remote Centralized Administration

RADIUS Characteristics

RADIUS

TACACS+ Characteristics Diameter Characteristics

Decentralized Access Control Administration

Module 5 - Security Models and Evaluation

System Protection – Trusted Computing Base

System Protection—Reference Monitor Security Kernel Requirements

Security Modes of Operation

System Protection— Levels of Trust

System Protection—Process Isolation

System Protection – Layering

System Protection - Application Program Interface

System Protection- Protection Rings

What Does It Mean to Be in a Specific Ring?

Security Models State Machine Information Flow Bell-LaPadula

Rules of Bell-LaPadula

Biba

Clark-Wilson Model Non-interference Model

Brewer and Nash - Chinese Wall

Take-Grant Model

Trusted Computer System Evaluation Criteria

TCSEC Rating Breakdown **Evaluation Criteria - ITSEC**

ITSEC Ratings

ITSEC - Good and Bad

Common Criteria

Common Criteria Components First Set of Requirements Second Set of Requirements Package Ratings

Common Criteria Outline Certification vs. Accreditation

Module 6 - Operations Security

Operations Issues Role of Operations Administrator Access Computer Operations – Systems Administrators Security Administrator Operational Assurance Audit and Compliance Some Threats to Computer Operations

Specific Operations Tasks

Product Implementation Concerns

Logs and Monitoring Records Management Change Control Resource Protection Contingency Planning

System Controls Trusted Recovery

Fault-Tolerance Mechanisms

Duplexing, Mirroring, Check Pointing

Redundant Array of Independent Disks (RAID)

Fault Tolerance

Redundancy Mechanism

Backups

Backup Types

Remote Access

Facsimile Security

Email Security

Before Carrying Out Vulnerability Testing

Vulnerability Assessments

Methodology

Penetration Testing

Penetration Testing

Hack and Attack Strategies

Protection Mechanism - Honeypot

Threats to Operations

Data Leakage – Social Engineering

Data Leakage – Object Reuse

Object Reuse

Why Not Just Delete File or Format the Disk?

Data Leakage – Keystroke Logging

Data Leakage – Emanation

Controlling Data Leakage – TEMPEST Controlling Data Leakage - Control Zone Controlling Data Leakage – White Noise

Summary

Module 7 - Symmetric Cryptography / Hashing

Cryptography Objectives Cryptographic Definitions

A Few More Definitions

Need Some More Definitions?

Symmetric Cryptography – Use of Secret Keys

Cryptography Uses Yesterday and Today

Historical Uses of Symmetric Cryptography

Scytale Cipher

Substitution Cipher

Caesar Cipher Example

Vigenere Cipher

Polyalphabetic Substitution

Vigenere Table Example

Example Continued

: Enigma Machine

Vernam Cipher

Running Key and Concealment

One-Time Pad Characteristics

Binary Mathematical Function

Key and Algorithm Relationship

128-Bit Key Protection v. 64-Bit Key Protection

Ways of Breaking Cryptosystems

Brute Force

Frequency Analysis

Determining Strength in a Cryptosystem

Characteristics of Strong Algorithms

Open or Closed More Secure?

Types of Ciphers Used Today

Encryption/Decryption Methods

Type of Symmetric Cipher – Block Cipher

S-Boxes Used in Block Ciphers

Type of Symmetric Cipher – Stream Cipher

Encryption Process

Symmetric Characteristics

Sender and Receiver Keystream

They both must have the same key and IV

Strength of a Stream Cipher

Let's Dive in Deeper

Symmetric Key Cryptography

Symmetric Key Management Issue

Symmetric Algorithm Examples

Symmetric Downfalls

Secret Versus Session Keys

Symmetric Ciphers We Will Dive Into

Symmetric Algorithms – DES

Evolution of DES

Block Cipher Modes – CBC

Different Modes of Block Ciphers – ECB

Block Cipher Modes – CFB and OFB

CFB and OFB Modes

Symmetric Cipher – AES

Other Symmetric Algorithms

Hashing Algorithms

Protecting the Integrity of Data

Data Integrity Mechanisms

Weakness in Using Only Hash Algorithms

More Protection in Data Integrity

MAC - Sender

MAC - Receiver

Security Issues in Hashing

Birthday Attack

Example of a Birthday Attack

Module 8 - Asymmetric Cryptography and PKI

Asymmetric Cryptography

Public Key Cryptography Advantages

Asymmetric Algorithm Disadvantages

Symmetric versus Asymmetric

Asymmetric

Asymmetric Algorithm – Diffie-Hellman

Asymmetric Algorithm – RSA

Asymmetric Algorithms - El Gamal and ECC Example of Hybrid Cryptography

When to Use Which Key

Using the Algorithm Types Together

Digital Signatures

Digital Signature and MAC Comparison

What if You Need All of the Services?

U.S. Government Standard Why Do We Need a PKI?

PKI and Its Components

CA and RA Roles

Let's Walk Through an Example

Digital Certificates

What Do You Do with a Certificate?

Components of PKI – Repository and CRLs

Steganography Key Management

Link versus End-to-End Encryption

End-to-End Encryption

E-mail Standards

Encrypted message

Secure Protocols

SSL and the OSI Model

SSL Hybrid Encryption

SSL Connection Setup

Secure E-mail Standard

SSH Security Protocol

Network Layer Protection

IPSec Key Management

Key Issues Within IPSec

IPSec Handshaking Process

SAs in Use

IPSec Is a Suite of Protocols

IPSec Modes of Operation

IPsec Modes of Operation

Attacks on Cryptosystems

More Attacks

Module 9 - Network Connections

Network Topologies - Physical Layer

Topology Type – Bus

Topology Type - Ring

Topology Type – Star

Network Topologies - Mesh

Summary of Topologies

LAN Media Access Technologies

One Goal of Media Access Technologies

Transmission Types

Analog and Digital

Synchronous and Asynchronous

Baseband and Broadband

Two Types of Carrier Sense Multiple Access

Transmission Types— Number of Receivers

Media Access Technologies - Ethernet

Media Access Technologies – Token Passing

Media Access Technologies - Polling

Cabling

Signal and Cable Issues

Cabling Types – Coaxial

Cabling Types – Twisted Pair

Types of Cabling – Fiber

Cabling Issues - Plenum-Rated

Types of Networks

Network Technologies

Network Technologies

Network Configurations

MAN Technologies - SONET

Wide Area Network Technologies

WAN Technologies Are Circuit or Packet Switched

WAN Technologies – ISDN

ISDN Service Types

WAN Technologies - DSL

WAN Technologies - Cable Modem

WAN Technologies - Packet Switched

WAN Technologies – X.25

WAN Technologies – Frame Relay

WAN Technologies – ATM

Multiplexing

Module 10 - Network Protocols and Devices

OSI Model

An Older Model

Data Encapsulation

OSI – Application Layer

OSI – Presentation Layer

OSI – Session Layer

Transport Layer

OSI – Network Layer

OSI - Data Link

OSI – Physical Layer

Protocols at Each Layer

Devices Work at Different Layers

Networking Devices

Repeater

Hub

Bridge

Switch

Virtual LAN

Router

Gateway

Bastion Host

Firewalls

Firewall - First line of defense Firewall Types – Packet Filtering Firewall Types – Proxy Firewalls

Firewall Types - Circuit-Level Proxy Firewall Type of Circuit- Level Proxy – SOCKS

Firewall Types – Application-Layer Proxy

Firewall Types – Stateful

Firewall Types – Dynamic Packet-Filtering

Firewall Types – Kernel Proxies

Firewall Placement

Firewall Architecture Types – Screened Host

Firewall Architecture Types – Multi- or Dual-Homed

Firewall Architecture Types – Screened Subnet

IDS - Second line of defense IPS – Last line of defense?

Unified Threat Management

UMT Product Criteria

Protocols TCP/IP Suite

Port and Protocol Relationship

Conceptual Use of Ports

UDP versus TCP Protocols – ARP Protocols – ICMP Protocols - SNMP Protocols – SMTP

Protocols – FTP, TFTP, Telnet Protocols – RARP and BootP Network Service – DNS

Network Service - NAT

Module 11 - Telephony, VPNs and Wireless

PSTN

Remote Access

Dial-Up Protocols and Authentication Protocols

Dial-Up Protocol - SLIP Dial-Up Protocol – PPP

Authentication Protocols – PAP and CHAP

Authentication Protocol – EAP

Voice Over IP

Private Branch Exchange

PBX Vulnerabilities **PBX** Best Practices

Virtual Private Network Technologies

What Is a Tunnelling Protocol? Tunnelling Protocols – PPTP Tunnelling Protocols – L2TP Tunnelling Protocols – IPSec

IPSec - Network Layer Protection

IPSec IPSec

SSL/TLS

Wireless Technologies - Access Point

Standards Comparison

Wireless Network Topologies

Wi-Fi Network Types

Wireless Technologies – Access Point Wireless Technologies – Service Set ID

Wireless Technologies - Authenticating to an AP

Wireless Technologies – WEP

WEP

Wireless Technologies – More WEP Woes

Weak IV Packets

More WEP Weaknesses How WPA Improves on WEP How WPA Improves on WEP

TKIP

The WPA MIC Vulnerability

802.11i – WPA2

WPA and WPA2 Mode Types

WPA-PSK Encryption

Wireless Technologies – WAP Wireless Technologies - WTLS

Wireless Technologies – Common Attacks Wireless Technologies – War Driving

Kismet

Wireless Technologies – Countermeasures

Network Based Attacks

ARP Attack DDoS Issues Man-in-the Middle Traceroute Operation

Module 12 - Security Architecture and Attacks

ESA Definition...

What is Architecture?

Architecture Components

Key Architecture Concepts - Plan Objectives of Security Architecture

Technology Domain Modeling

Integrated Security is Designed Security

Security by Design **Architectural Models** Virtual Machines Cloud Computing Memory Types

Virtual Memory Memory Management

Accessing Memory Securely

Different States that Processes Work In

System Functionality Types of Compromises

Disclosing Data in an Unauthorized Manner

Circumventing Access Controls

Attacks

Attack Type – Race Condition Attack Type - Data Validation Attacking Through Applications

How Buffers and Stacks Are Supposed to Work

How a Buffer Overflow Works

Attack Characteristics

Attack Types More Attacks

Host Name Resolution Attacks

More Attacks (2)

Watching Network Traffic

Traffic Analysis Cell Phone Cloning Illegal Activities

Module 13 - Software Development Security

How Did We Get Here?

Device vs. Software Security

Why Are We Not Improving at a Higher Rate?

Usual Trend of Dealing with Security

Where to Implement Security

The Objective

Security of Embedded Systems **Development Methodologies**

Maturity Models Security Issues

OWASP Top Ten (2011) Modularity of Objects

Object-Oriented Programming Characteristic

Module Characteristics Linking Through COM

Mobile Code with Active Content

World Wide Web OLE **ActiveX Security** Java and Applets

Common Gateway Interface

How CGI Scripts Work

Cookies

PCI Requirements Virtualization - Type 1 Virtualization – Type 2

Module 14 - Database Security / Development

Database Model

Database Models - Hierarchical

Database Models - Distributed Database Models – Relational

Database Systems

Database Models – Relational Components

Foreign Key

Database Component

Database Security Mechanisms Database Data Integrity Controls

Add-On Security

Database Security Issues

Controlling Access Database Integrity Data Warehousing Data Mining

Artificial Intelligence

Expert System Components Artificial Neural Networks Software Development Models

Project Development – Phases III, IV, and V

Project Development–Phases VI and VII

Verification versus Validation **Evaluating the Resulting Product** Controlling How Changes Take Place

Change Control Process Administrative Controls

Malware Virus

More Malware

Rootkits and Backdoors **DDoS Attack Types** Escalation of Privilege

Protect against privilege escalation

DDoS Issues

DDoS

Buffer Overflow Definition Overflow Illustration Mail Bombing E-Mail Links Phishing Spear Phishing

Summary

Module 16 - Business Continuity

Phases of Plan

Who Is Ready?

Pieces of the BCP

BCP Development

Where Do We Start?

Why Is BCP a Hard Sell to Management?

Understanding the Organization Critical products and services

Dependencies

Supply chain

Between departments

Personnel

Information

Equipment

Facilities

BCP Committee

BCP Risk Analysis

Identify Vulnerabilities and Threats

Categories

How to Identify the Most Critical Company Functions

Loss Criteria

Interdependencies

Identifying Functions' Resources

Operation Time Without Resources

Calculating MTD

Recovery Point Objective

Calculation of maximum data loss

Determines backup strategy

Defines the most current state of data upon recovery

Recovery Strategies

Based on the results of the BIA

May be different for each department

Must be less than MTD

Sets the RTO

What Items Need to Be Considered in a Recovery?

Facility Backups – Hot Site

Facility Backups – Warm Site

Facility Backups – Cold Site

Compatibility Issues with Offsite Facility

Which Do We Use?

Choosing Offsite Services

Subscription Costs

Choosing Site Location

Other Offsite Approaches

BCP Plans Lifespan

Summary

Module 17 - Disaster Recovery

Proper Planning

Executive Succession Planning

Preventing a Disaster

Preventive Measures

Backup/Redundancy Options

Disk Shadowing

Backing Up Over Telecommunication Serial Lines

HSM

SAN

Co-Location

Other Options

Review - Results from the BIA

Review - Results from Recovery Strategy

Now What?

Priorities

Plan Objectives

Defining Roles

The Plan

Recovery

Return to Normal Operations

Environment

Operational Planning

Emergency Response

Reviewing Insurance

When Is the Danger Over?

Now What?

Testing and Drills

Types of Tests to Choose From

What Is Success?

Summary

Module 18 - Incident Management, Law, and **Ethics**

Seriousness of Computer Crimes Incidents

Incident Management Priorities Incident Response Capability **Incident Management Requires** Preparing for a Crime Before It Happens

Incident Response Phases

Types of Law

Foundational Concepts of Law

Common Laws – Criminal

Common Laws - Civil

Common Laws – Administrative

Intellectual Property Laws

More Intellectual Property Laws

Software Licensing

Digital Millennium Copyright Act

Historic Examples of Computer Crimes

Who Perpetrates These Crimes?

The Evolving Threat

Types of Motivation for Attacks

A Few Attack Types Telephone Fraud

Identification Protection & Prosecution

Computer Crime and Its Barriers

Countries Working Together

Security Principles for International Use

Determine if a Crime Has Indeed Been Committed

When Should Law Enforcement Get Involved?

Citizen versus Law Enforcement Investigation

Investigation of Any Crime Role of Evidence in a Trial General Rules for Evidence

Evidence Requirements

Evidence Collection Topics

Chain of Custody

How Is Evidence Processed?

Evidence Types

Hearsay Rule Exception

Privacy of Sensitive Data

Privacy Issues - U.S. Laws as Examples

European Union Principles on Privacy

Routing Data Through Different Countries

Employee Privacy Issues

Computer Forensics

Trying to Trap the Bad Guy

Companies Can Be Found Liable

Sets of Ethics

Ethics - mile2

Ethics – Computer Ethics Institute

Ethics – Internet Architecture Board

GAISP- Generally Accepted Information Security

Principles

Module 19 - Physical Security

Physical Security – Threats

Different Types of Threats & Planning

Facility Site Selection

Facility Construction

Devices Will Fail

Controlling Access

Possible Threats

External Boundary Protection

Lock Types

Facility Access

Piggybacking

Securing Mobile Devices

Entrance Protection

Perimeter Protection – Fencing

Perimeter Protection – Lighting

Perimeter Security – Security Guards

Surveillance/Monitoring

Types of Physical IDS

Electro-Mechanical Sensors
